## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 15, 17, 20, 22 and 23 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

2. Claims 1-14, 21, 24-27, 39, 40, 45, 50-61 and 63-71 are allowed.
3. Claims 16, 18 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any Intervening claims.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 15, 17, 20, 22 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fatehi et al. US006600581B1 (Fatehi) in view of Kusyk US 6,246,668 B1 (Kusyk).

Regarding claim(s) 15, 17, and 20 Fatehi disclosed

A system for verifying connections established through a switching unit adapted to receive a plurality of input signals and output a plurality of switched signals (e.g., col./line: 2/57-67), comprising: a

Art Unit: 2638

selection unit for controllably admitting individual ones of the input signals and individual ones of the switched signals (figure 1 #102, e.g., col./line: 8/4-22); and a verification unit (figure 1 #102, e.g., col./line: 8/4-22) connected to the selection unit, for controlling operation of the selection unit as a function of a connection map (figure 1 #103) and performing operations (figure 5, e.g., col./line: 7/50-67) on the signals admitted by the selection unit so as to identify connections established through the switching unit and determine their consistency with the connection map.

Fatehi does not disclose disclosed admitting a pair of signals

Kusyk disclosed a multiplexer (Figure 6A, 6B) used in the selection of signals. It would have been obvious to one of ordinary skill in the art at the time of invention to use the Kusyk multiplexer for selecting signals in the Fatehi apparatus since multiplexers are commonly used to feed multiple inputs into a single output. Furthermore, the signals in Kusyk or in Fatehi alone would be considered admitted to one of ordinary skill in the art since they art at a minimum admitted into the cross-connection switch. Fatehi further disclosed a method/system of determining a level of correlation (figure 5 #505, Yes branch) or anti-correlation (figure 5 #505, No branch) between the selected input signal and the switched signal expected to be correlated with the selected input signal; and if the level of correlation is significant or the level of anti-correlation is insignificant, concluding that the connection involving the selected input signal is consistent with the connection map (e.g., col./line: 8/10-20).

Regarding claim(s) 22, 23

Fatehi further disclosed

Computer-readable media tangibly embodying a program of instructions executable by a computer to perform a method of validating connections established through a switching unit adapted to receive a plurality of input signals and output a plurality of switched signals (e.g., col./line: 9/10-30, 9/52-67, 10/1-5).
